IN EQUITY NO. C-125-C-ECR

MINERAL COUNTY'S
AMENDED COMPLAINT IN
INTERVENTION

COMES NOW, Plaintiff-Intervenor, MINERAL COUNTY OF NEVADA, by
and through its attorneys of record, on its own behalf and for benefit of the citizens,
residents, and users of Walker Lake, and claims as follows:

///

///

ZEH, SPOO & HEARNE
450 Marsh Avenue • Reno, NV 89509
Phone: (702) 323-4599 • Fax (702) 786-8183

I.

INTRODUCTION

1. This claim is made for recognition of a right of minimum level of water for Walker Lake by means of certain right being reserved and allowed to flow down the Walker River both east and west forks, in sufficient quantity to reach, replenish, and maintain Walker Lake. Such minimum levels are requested based upon sufficient water to sustain naturally occurring fish population, including, but not limited to, the Chub, Lahouton Sucker, and Cutthroat Trout.

II.

JURISDICTION

2. Jurisdiction over this claim is pursuant to the continuing jurisdiction of this Court over the waters of the Walker River and its tributaries in California and Nevada; and the matter in controversy arises under the Constitution, laws, or treaties of the United States.

III.

PARTIES

3. Plaintiff-Intervenor, MINERAL COUNTY OF NEVADA, appears in this case on its own behalf and for the benefit of the citizens and residents of Mineral County and on behalf of the public, users of Walker Lake and for recreational, aesthetic preservation of wildlife and for economic purposes. Mineral County is duly

1 established under the laws of the State of Nevada and retains all rights delegated
 2 pursuant to NRS 244.165 with the capacity to sue in its own name.

3 4. Respondents are all water users on the Walker River and its tributaries as
 4 set forth in the Final Decree or have statutory or regulatory authority over the
 5 allocation and protection of waters on the Walker River.
 6

7 IV.

8 GENERAL ALLEGATIONS

9 5. Plaintiff-Intervenor, MINERAL COUNTY OF NEVADA, hereinafter
 10 referred to as, "County," currently benefits from the presence of sufficient levels of
 11 water in Walker Lake. The Nevada Department of Wildlife holds in trust for Mineral
 12 County, the right to 700 cfs. of surplus flows annually, Certificate No. 10860, granted
 13 by the State Engineer of Nevada on December 28, 1983.
 14

15 6. Walker Lake and approximately 16 linear miles of Walker River are
 16 totally contained within the legal boundaries of Mineral County. The elevation of
 17 Walker Lake in 1908 was 4,077 feet. The elevation of Walker Lake in 1993 was
 18 3,950 feet which is equivalent to a loss of one-half of the Lake. The levels required
 19 to maintain Walker Lake as a viable fishery are at an elevation of 3,972 feet. At the
 20 present rate of depletion Walker Lake will be dry by the year 2020.
 21

22 7. Walker Lake supports recreational fishing, boating, and wildlife habitat.
 23 Activities and businesses attributable to the presence and use of Walker Lake
 24 represents approximately 50% of the economy of Mineral County.
 25
 26
 27
 28

13. An adjudication and reallocation of the waters of Walker River to preserve the minimum levels in Walker Lake, as a condition to the water rights licenses of all upstream users -- such requirements of minimum levels of Walker Lake to be a condition to each license and certificate presently held by upstream license

holders in California and Nevada.

14. Imposition of responsibilities on the State of California and State of Nevada to maintain the public trust in Walker Lake by protecting minimum flows for naturally occurring fish populations.

15. The right to, at least, 127,000 acre feet of flows annually reserved from the Walker River that will reach Walker Lake.

WHEREFORE, Plaintiff-Intervenor, prays:

1. The Court, pursuant to its continuing jurisdiction under paragraphs XIV of the Final Decree, reopen and modify the final Decree to recognize the rights of Mineral County, its citizens and residents and other users of Walker Lake and the public to have minimum levels to maintain the viability of Walker Lake as a body of water to sustain its naturally occurring fish population and for recreational benefits, wildlife preservation, aesthetic and economic beneficial use.

2. That the Court order the State of Nevada to grant a certificate to Mineral County for the benefit of Walker Lake in the amount of 127,000 acre/feet per year.

3. That the Court recognize that a minimum of three feet above sea level in Walker Lake is necessary to maintain the viability of Walker Lake as a body of water to sustain its naturally occurring fish population and for recreational benefits, wildlife preservation, aesthetic and economic benefits and that a minimum of 127,000 acre/feet per year to Walker Lake is a beneficial use and in the public interest and required

1 under the doctrine of maintenance of the public trust.

2 4. That the Court grant such other and further relief as it deems just and
3 proper.

I.

INTRODUCTION

Since the dawn of the ice age, Walker Lake, an arm of the Pleistocene Lake Lahontan, has graced the desert landscape of Mineral County. Throughout pre-recorded human history and into the twentieth century, Walker Lake continued to support the naturally occurring Cutthroat Trout, Lahontan suckers, and tui chub, enough so that the Indian tribes living on the banks of this lake were actually named for their consumption of the bounty of the Lake. Walker Lake is a terminal lake fed by the waters of the Walker River. This river represents 84% of the lake's source of recharge with the balance made up from rainwater and groundwater. (See, Declaration of Kelvin J. Buchanan already filed 10/25/94, hereinafter referred to as, "Buchanan Declaration".)

In 1989, there were a series of events beginning with the release of sediment-laden irrigation water from Bridgeport Reservoir. This dewatering of the Reservoir resulted in litigation by upstream interests, initiated by the State Water Resources Control Board of California (SWRCB), which initiated the total loss of the fishery at Walker Lake, quickly and certainly, without further consideration. By the actions taken to retain minimum levels at Bridgeport Reservoir, a man-made trout fishery, the SWRCB essentially decreed a death sentence to Walker Lake, a naturally created trout fishery.

Simultaneously, in conjunction with this action by the SWRCB, the Walker River Irrigation District (WRID), manager of storage and irrigation allocations along

ZEH, SPOO & HEARNE
450 Marsh Avenue • Reno, NV 89509
Phone: (702) 323-4599 • Fax (702) 786-8183

1 the River, has failed in its stewardship. WRID has failed to mitigate waste of water
2 resources along the River, failed to monitor and require returns of irrigation water to
3 the river channel, and failed to require that the diversions be technically efficient,
4 thereby, preserving the river to the extent possible with twentieth century technology.
5 This failure has reduced the available waters to flow through the Walker River to
6 Walker Lake. (See, Buchanan Declaration.) WRID has also allocated more water for
7 irrigation then contemplated at the time the decree in C-125 was adopted. (Headley,
8 Economic Study of Walker River Irrigation District.)
9

11 The State of Nevada has failed to enforce the water pollution laws and issued
12 certificates for diversions that allowed allocations to greatly exceed the waters of the
13 River actually available which deprives any natural or excess flows from reaching
14 Walker Lake. WRID, the State of Nevada, and the Walker River Paiute Tribe (the
15 "Tribe") have not contracted with the United States to install and maintain accurate
16 measuring devices along the Walker River so that lawful and proper allocations of
17 water will be made (see, Declaration of Buchanan). As a result, Walker Lake has
18 been denied flows that might have survived the treacherous path along the River to its
19 inlet.
20
21

23 Without sufficient flows through the Walker River arriving at Walker Lake, the
24 Lake has dropped so precipitously that, some scientists predict, within two years the
25 Lake will not be able to support its naturally occurring fish population (see,
26 Declaration of Buchanan). Mineral County depends on this resource for recreation,
27 wildlife habitat, and other economic and aesthetic reasons for both the citizens of
28

1 Mineral County and the users of the Lake.

2 Mineral County requests intervention into this case in order to represent
3 interests for the preservation of this irreplaceable natural resource, Walker Lake,
4 which is nearly totally dependent on adequate flows from the Walker River.
5

6
7 II.

8 ARGUMENT

9
10 A. MINERAL COUNTY MEETS THE REQUIREMENTS
11 FOR INTERVENTION AS OF RIGHT UNDER RULE
12 24(a)(2), F.R.C.P.

13 1. Mineral County Has Not Delayed in Moving
14 to Intervene in the Pertinent Federal Case
15 Affecting the Adjudication of the Waters of
16 the Walker River, Case C-125.

17 Intervention as of right under Rule 24(a)(2) Federal Rules of Civil
18 Procedure¹ requires that the applicant claim an interest, the protection of which may as
19 a practical matter be impaired or impeded if the lawsuit proceeds without him. The
20 Ninth Circuit has enunciated the test to be administered for applying these elements of
21 Rule 24, F.R.C.P.:

22 We (the 9th Circuit Court of Appeals) apply a four-part test
23 under this rule: (1) the motion must be timely; (2) the
24 applicant must claim a "significant protectable" interest

25 ¹Rule 24 Federal Rules of Civil Procedure: (a) Intervention of Right. Upon timely
26 application anyone shall be permitted to intervene in an action: (2) when the applicant
27 claims an interest relating to the property or transaction which is the subject of the
28 action and the applicant is so situated that the disposition of the action may as a
practical matter impair or impede the applicant's ability to protect that interest, unless
the applicant's interest is adequately represented by existing parties.

1 relating to the property or transaction which is the subject
2 of the action; (3) the applicant must be so situated that the
3 disposition of the action may as a practical matter impair or
4 impede its ability to protect that interest; and (4) the
5 applicant's interest must be inadequately represented by the
6 parties to the action. Sierra Club v. U.S. E.P.A., 995 F.2d
7 1478 (9th Cir. 1993) at page 1481.

8
9 Moreover, Rule 24, F.R.C.P., is to be liberally applied:

10 The rule is construed "broadly in favor of the applicants for
11 intervention." Sierra Club v. U.S. E.P.A., *supra* at page
12 1481.

13 Taking the elements of the Ninth Circuit's test, *seriatim*, and then
14 tempering that by the liberal construction to be given Rule 24, F.R.C.P., it is evident
15 that Mineral County satisfied the requirements of Rule 24, F.R.C.P., and should be
16 allowed to intervene as of right in this case as developed, below.

17 A decision on the appropriation of the waters of the Walker River
18 materially affects the preservation of Walker Lake. Mineral County cannot protect the
19 interests of the Lake unless it can represent those interests in the present litigation.
20

21 The Court must, in its discretion, based upon the circumstances,
22 determine if the motion to intervene is timely:
23

24 Timeliness of intervention is a matter for the sound
25 discretion of the trial court, NAACP v. New York, 413
26 U.S. 345, 365-66, 93 S.Ct. 2591, 2602-03, 37 L.Ed.2d
27 648(1973), but a court should be more reluctant to refuse
28 when intervention is sought of right, as here. United Sates
v. American Telephone and Telegraph Co., 642 F.2d 1285,
1295 (D.C. Cir.1980). Williams and Humbert Limited v.

1 W.&H. Trade Marks (Jersey) Ltd., 840 F.2d 72 (D.C. Cir.
2 1988) at pp. 74-75.

3 The Ninth Circuit has also set forth the standard for assessing the
4 timeliness of a motion to intervene:

5 In determining whether a motion to intervene is timely, we
6 evaluate three factors: (1) the stage of the proceeding at
7 which an applicant seeks to intervene; (2) the prejudice to
8 other parties; and (3) the reason for and length of the delay.
9 County of Orange v. Air California, 799 F2d 535 (9th Cir.
10 1986), cert. denied, 480 U.S. 946, 107 S.Ct. 1605, 94
L.Ed2d 791 (1987) (citing United States v. Oregon, 745
F.2d 550 (9th Cir.1984).

11 Sierra Club v. U.S. E.P.A., supra at p. 1481.

12 Without a doubt, Mineral County's motion under Rule 24,
13 F.R.C.P. is timely, first and foremost, because Mineral County began the process for
14 intervention as soon as the Commissioners learned of the litigation. Mineral County
15 had no knowledge of the litigation until September 1, 1994, and has never had written
16 notice by any of the other parties of this litigation (see, Declaration of Herman F.
17 Staat already filed 10/24/94). The County has clearly acted immediately upon the
18 information, once supplied them. The County's immediate actions could not be
19 construed as dilatory or less than vigilant in protecting their rights. Rule 24,
20 F.R.C.P., demands no more of a potential intervenor in the timely pursuit of a claim.

24 Furthermore, Mineral County seeks to intervene in these
25 proceedings at a time that notice is being given to other parties that may wish to
26 intervene. By November 25, 1994, the Tribe, Plaintiff-Intervenor, will give notice to
27 all surface water diversion license holders of the Walker River, pursuant to order of
28

ZEH, SPOO & HEARNE
450 Marsh Avenue • Reno, NV 89509
Phone: (702) 323-4599 • Fax (702) 786-8183

1 the Court (see, May 23, 1994, Stipulation and Order for Enlargement of Time). After
2 this Notice any certified holder may wish to intervene to protect his interest or water
3 diversion. Mineral County's intervention at this time will not be any different than
4 the other potential interventions that may join after this Court ordered notice.
5

6 Moreover, these proceedings have not progressed to an agreement
7 on the merits or substance of the case. Neither actual diversions, the request by the
8 Tribe for additional quantities, the unlawful conditions imposed upon the Walker
9 River Irrigation District ("WRID") by the SWRCB, nor the change of diversion
10 requested by WRID has been heard, nor has discovery been commenced by any of the
11 parties. The preliminary stage in the proceedings also argues in favor of intervention.
12
13 See, Mille Lacs Band of Indians v. State of Minn., 989 F.2d 994 (8th Cir. 1993).
14

15 No prejudice to other parties could possibly arise because of the
16 intervention of Mineral County. Its presence will not cause to unravel a complex
17 settlement since none has been completed and entered into by the parties. The parties
18 will remain essentially in the same position as if Mineral County had intervened
19 earlier. See, U.S. ex rel. McGough v. Covington Technologies, 967 F.2d 1391 (9th
20 Cir. 1992).
21
22

23 Each element of the three-pronged timeliness test set forth in the
24 Sierra Club case is manifestly satisfied, here. There is no plausible basis for denying
25 the motion of Mineral County to intervene because it is delinquent. Having engaged
26 counsel, approved its intervention and voted to go forward to protect the interests of
27 Walker Lake within less than 60 days from the date Mineral County learned of this
28

1 litigation, Mineral County has been diligent. For these reasons, the intervention of
 2 Mineral County is timely and should be allowed by this Court.
 3
 4

5 B. MINERAL COUNTY HAS A SIGNIFICANT
 6 PROTECTABLE INTEREST IN THE PRESERVATION
 7 OF WALKER LAKE

- 8 1. Mineral County Has Water Rights in the
 9 Surplus Flows of the Walker River That
 10 Directly Feed the Waters of Walker Lake and,
 11 Moreover, Mineral County Asserts the Right
 12 to Minimum Sustainable Levels in Walker
 13 Lake on Behalf of the Public.

14 Mineral County is the only party representing the preservation of
 15 Walker Lake. Nevada State Law recognizes that recreational purpose is a beneficial
 16 use, NRS 533.030(c). This recreational, beneficial use can be a right to flows in situ
 17 without the requirement of diversion from the source. A similar fact situation arose in
 18 Humboldt County, Nevada:

19 The Blue Lake application is for a water grant to waters of
 20 Blue Lake in situ, in place as a natural body of water. The
 21 BLM manages the land surrounding the lake and desires this
 22 water right to assure maintenance of Blue Lake for public
 23 recreation and fishery purposes.

24 State v. Morros, 766 P.2d 263, 265 (Nev. 1988).

25 The State of Nevada recognizes the recreational purpose and the
 26 in situ appropriation. Pursuant to this recognition, the State of Nevada issued a
 27 certificate for 795.2 Cfs to the Nevada Department of Fish and Game (now the
 28 Department of Wildlife) on December 28, 1983, for Walker Lake. The Department

1 of Wildlife holds the certificate in trust for the benefit of Mineral County. (See,
2 Exhibit "A" to Memorandum of Points and Authorities filed 10/24/94.) This trust
3 relationship where a state agency holds rights for the benefit of the public has been
4 recognized by other states. Permit No. 36-7200 In the Name of the Idaho Department
5 of Parks & Recreation, 828 P.2d 848 (Id. 1992).

6
7 The Court has precedent to determine such matters of a "water
8 duty for public recreation."
9

10 The court need not allow the issue to lie unresolved; if the
11 United States (in the instant case, the State of Nevada) is
12 unwilling to represent the public, anyone with standing who
13 can adequately represent the public's interest may be
14 allowed to do so. [Parenthetical added.] United States v.
15 Alpine Land & Reservoir Co., 697 F.2d 851, 860 (9th Cir.
16 1983).
17
18

19
20 The State of Nevada has failed to come forward to enforce its
21 public trust responsibilities to preserve minimum flows to the lake and failed to protect
22 the water quality of Walker Lake. Mineral County will allege that it is the only party
23 representing such responsibilities.
24

25 Mineral County will also allege that the Court should review the
26 allocation in the C-125 decree of 1936 to determine if the waters of the Walker River
27 are being put to beneficial use.
28

ZEH, SPOO & HEARNE
450 Marsh Avenue • Reno, NV 89509
Phone: (702) 323-4599 • Fax (702) 786-8183

1 The Court must determine beneficial use from the circumstances
2 before it. United States v. Alpine Land and Reservoir Co., supra. Beneficial use is a
3 dynamic concept and should not allow waste. Circumstances in 1994 are different
4 than in 1936 when the Walker River Decree was last considered; different, in that
5 society has determined that preservation of our natural waterways are critical to
6 environmental balance and ecological survival. A summary of the conflict between in-
7 stream flow preservation and appropriative rights is found in Johnson, "Reallocation"
8 Volume 2, Chapter 16, Water and Water Rights.
9

10 A reallocation of the waters of Walker River is required to
11 preserve the public's right to the natural body of water existing in Mineral County
12 known as Walker Lake. The State holds land in its sovereign capacity in trust for the
13 public purposes of navigation and fisheries. Any conveyance of trust property to a
14 private individual, as in the case of a certificate of appropriation for waters, is subject
15 to the public trust and the State remains trustee with the duty to supervise the trust.
16
17 See, National Audubon Society v. Superior Court, 33 Cal.3d 419, 189 Cal.Rptr. 346,
18 658 P.2d 709 (Cal. 1983). Mineral County requests intervention to insure that the
19 State of Nevada performs its duties and obligations as trustee of the waters of Walker
20 Lake for the benefit of the public.
21
22
23

24 ///

 Phone: (702) 323-4599 • Fax (702) 786-8183

2. Mineral County Has a Great Financial Stake in the Property Values of Mineral County's Taxable Private Property, Which Are Inexorably Attached to the Presence of Walker Lake and Would, Likewise, Be Devalued by Loss of the Lake.

Mineral County has the right to tax the property of the private owners situated in and around Walker Lake since it is totally located within the political and legal boundaries of the County. N.R.S., Section 244.150. Any devaluation of the property values in Mineral County because of loss of Walker Lake will substantially reduce the budget of Mineral County which is dependent upon property tax revenues (see, Declaration of Marlene Bunch, hereinafter referred to as "Declaration of Bunch," already filed 10/25/94). "These taxing and regulatory interests are inherently ripe for protection by intervention as a practical means for a political subdivision to protect its financial and administrative affairs. Scotts Valley Band of Pomo Indians of the Sugar Bowl Rancheria v. U.S., 921 F.2d 924, 928 (9th Cir.1990). Mineral County will allege the substantial loss of value of property within its borders if Walker Lake ceases to be a viable fishery.

3. Mineral County Has a Significant Protectable Interest in the Recreation, Wildlife Habitat, Aesthetic and Other Economic Concerns That Support Mineral County Because of the Presence of Walker Lake.

Mineral County has participated in many federal and state actions to preserve and enhance the Lake. (See, Exhibit "B" to Memorandum of Points and

1 Authorities filed 10/25/94.) Mineral County has always been very interested and
2 active in Lake matters (see, Declaration of Buchanan). Likewise, the federal courts
3 have recognized these are significant protectable interests justifying the right to
4 intervene by other public agencies that have actively participated in the issue that will
5 be affected by the litigation. See, Sagebrush Rebellion, Inc. v. Watt, 713 F.2d 525
6 (9th Cir. 1983).
7

8
9 Mineral County has a more critical concern than a public
10 advocacy group as was the intervenor in Sagebrush Rebellion in protecting the
11 interests of its citizens and the users of Walker Lake. A substantial percentage of
12 Mineral County's businesses is related to Walker Lake and its available recreation
13 (see, Declaration of Louis Thompson (hereinafter referred to as "Declaration of
14 Thompson") already filed 10/25/94). Significant decreases in the revenues to these
15 businesses have been realized already because of the damage to the Lake by the loss
16 of flows into the Lake from the Walker River. (See, Declarations of Bunch and
17 Thompson.)
18

19
20 The loss of flows of the Walker River into Walker Lake has so
21 degraded the quality of the water of the Lake that fish no longer flourish and other
22 wildlife have disdained to make Walker Lake their home or transient stop in migratory
23 journeys. Besides the inability for the businesses to survive because of the loss of
24 fishing in the Lake, other tourists are lost because the pathetic condition of reduced
25 Lake levels does not entice those who came before to witness the pristine beauty of
26 the Lake and the abundance of waterfowl and other wildlife present. Tourists do not
27
28

ZEI, SPOO & HEARNE
450 Marsh Avenue • Reno, NV 89509
Phone: (702) 323-4599 • Fax (702) 786-8183

1 come to witness the death of a Lake.

2
3
4 Only Mineral County is so affected by the loss of tourism and the
5 presence of a naturally occurring desert lake with the exceptional beauty of the water
6 itself and the incumbent wildlife populations. The loss of the familiar view of the
7 Lake to a community that has little else in its vista cannot be measured in property
8 terms alone, but must also be measured in aesthetic, environmental, and historical
9 terms. Flows from Walker River are the only means by which Walker Lake can be
10 rejuvenated and maintained. (See, Declaration of Buchanan.)

11
12 "[T]he determination of whether an interest is
13 sufficient for Rule 24(a)(2) purposes is colored to some
14 extent by the third factor-whether disposition of the action
15 may, as a practical matter, impair or impede the applicant's
16 ability to protect its interest." Conservation Law
Foundation v. Mosbacher, 966 F.2d 39 (1st Cir. 1992).

17
18 The U.S. Supreme Court allowed the intervention (certain Indian
19 tribes who had claims in the Corado R. adjudication) on similar grounds as Mineral
20 County alleges herein. "Accordingly, the Indians' participation in litigation critical to
21 their welfare should not be discouraged." Arizona v. California, 460 U.S. 605, 615,
22 103 S.Ct. 1382, 1389 (1983). Mineral County is not a party to the original decree
23 nor had it suffered any injury at that point in history regarding degradation of the
24 Lake. Mineral County will contend the original decree omitted reference to Walker
25 Lake. Mineral County will ask this Court to interpret and modify the Decree, if
26
27
28 necessary, in light of Mineral County's substantial injury. Mineral County does not

ZEH, SPOO & HEARNE
450 Marsh Avenue • Reno, NV 89509
Phone: (702) 323-4599 • Fax (702) 786-8183

1 believe that the original decree gave the upstream users the right to de-water Walker
2 Lake. (See, Nebraska v. Wyoming, 113 S.Ct. 1689 (1993).

3
4 One of the allegations of the Mineral County position is that the
5 waters of Walker River are allocated beyond the capacity of the River, leaving no
6 natural flows left to enter the Lake. The instant litigation is where the issues of
7 allocation will be adjudicated. Mineral County must be allowed to intervene in order
8 to preserve and protect Walker Lake in the forum where reallocations can and will be
9 determined, the instant case.
10

11
12 C. MINERAL COUNTY IS NOT ADEQUATELY
13 REPRESENTED BY ANY OF THE PRESENT PARTIES
14 TO THE LITIGATION

15 Mineral County may very well have interests coincident with some of the
16 parties to the present litigation to contest the right of the SWRCB to entrap flows to
17 protect the man-made fishery of Bridgeport Reservoir at the cost of the natural fishery
18 in Walker Lake. But no other party to this litigation has expressed even a casual
19 reference to the protection of the levels of Walker Lake.
20

21 Whether a party may intervene turns, in part, upon a
22 comparison of the adequacy of representation primarily by
23 comparing the interests of the proposed intervenor with the
24 current parties to the action. Sierra Club v. Robertson, 960
25 F.2d 83, 86 (8th Cir. 1992). To satisfy the adequacy of
26 representation test, an intervenor . . . need only show that
27 representation may be inadequate, not that it is inadequate.
28 Conservation Law Foundation v. Mosbacher, 966 F.2d 39
(1st Cir. 1992). (Emphasis added.)

ZEI, SPOO & HEARNE
 450 Marsh Avenue • Reno, NV 89509
 Phone: (702) 323-4599 • Fax (702) 786-8183

The State of Nevada is required by its very position to protect all of its citizens. The interests of its citizens are not necessarily identical and may become competing. Some residents may not favor the preservation of Walker Lake, if other, more immediate, pronounced, or self-serving interests are at stake. The burden of showing inadequate representation by a political sub-entity of a State when that State is a party also, may be more than minimal; however, Mineral County can more than show why its interests differ from all of the interests that the State of Nevada must represent upstream. See, Environmental Defense Fund v. Higginson, 631 F.2d 738 (D.C. Cir. 1979). The State must protect its own decisions regarding the appropriation of the waters of the Walker River which may in large part have deprived Walker Lake of its critical recharge. Further the State of Nevada only listed its concern for protection of the Mason Valley Wildlife Preserve as any specific reason for its intervention. (See, State of Nevada Motion for Intervention, Page 3, Lines 12-15.) Walker Lake, indeed, has no protector but Mineral County.

D. MINERAL COUNTY HAS NO OTHER MEANS TO PROTECT ITS INTEREST IN WALKER LAKE THAN TO ENTER THIS PROCEEDING AND PRAY THAT THIS COURT REALLOCATE THE WATERS OF THE WALKER RIVER

The Walker River is a stream the headwaters of which rise on the eastern slopes of the Sierra Nevada mountains in California. United States v. Walker River Irr. Dist., 104 F.2d 334 (9th Cir. 1939). The River flows through lands that are arid, mostly rough or mountainous into the Walker River Paiute Reservation for a distance

ZEHL, SPOO & HEARNE
 450 Marsh Avenue • Reno, NV 89509
 Phone: (702) 323-4599 • Fax (702) 786-8183

of approximately thirty miles where the stream empties into Walker Lake. See, United States v. Walker River Irr. Dist., supra at p. 335. The River has been the subject of litigation culminating in the Decree of C-125 entered on April 14, 1936, which is the basis for the continuing jurisdiction of this Court and the instant litigation. In order for Mineral County to claim minimum flows and in situ rights for the Lake, Mineral County must be a party to this action. An adjudication is a quiet title action in equity for the purpose of settling all claims to the waters of the watercourse that is the subject of the adjudication. (United States v. Truckee-Carson Irrigation District, 649 F.2d 1286, 1308 (9th Cir. 1981), United States v. Alpine Land and Reservoirs Co., supra. When the matters brought before this Court are determined and the waters of the Walker River reallocated accordingly, the fate of Walker Lake will be in the balance.

E. IN THE EVENT THAT THIS COURT DOES NOT ALLOW MINERAL COUNTY INTERVENTION AS OF RIGHT, IN THE ALTERNATIVE MINERAL COUNTY ASKS FOR PERMISSIVE INTERVENTION PURSUANT TO F.R.C.P. 24(b)(2)

1. Mineral County Meets Each and Every Element of Permissive Intervention Pursuant to F.R.C.P. 24(b)(2).²

Permissive intervention is allowed a party that has a claim that involves a question of law or fact that is common to the main action. In both the

²Rule 24. Intervention (b) Permissive Intervention. Upon timely application anyone may be permitted to intervene in an action: . . . (2) when an applicant's claim or defense and the main action have a question of law or fact in common.)

ZEH, SPOO & HEARNE
 450 Marsh Avenue • Reno, NV 89509
 Phone: (702) 323-4599 • Fax (702) 786-8183

claims presently filed, Mineral County's request for flows to Walker Lake will impact the outcome and the considerations. Because Walker Lake is located in Mineral County and comprises such an integral part of the economy and well-being of Mineral County, the County Commission considered it part of their public duty to protect and preserve the Lake as a healthy, viable recreational asset and fishery.

It is a living tenet of our society and not mere rhetoric that a public office is a public trust. While a public official may not intrude in a purely private controversy, permissive intervention is available when sought because an aspect of the public interest with which he is officially concerned is involved in the litigation. Nuesse v. Camp, 385 F.2d 694, 702 (D.C. Dist. 1967).

2. The Intervention of Mineral County at this Stage of These Proceedings Will Not Unduly Delay the Litigation And, Moreover, Will Significantly Contribute to the Underlying Factual and Legal Issues.

No party to this litigation presently can offer the intimate knowledge of the Lake that Mineral County can. Mineral County has accumulated as much information as it can find regarding the scientific studies involving the biology, geology, hydrology and history of Walker Lake. Starting when the Bureau of Land Management indicated an interest in funding the recreational aspects of the Lake, and particularly through the last years when the loss of the Lake has been imminent, Mineral County has requested assistance in analysis from United States Senator Harry Reid, the Office of Technology Assistance, the University of Nevada at Reno, the State of Nevada Division of Wildlife, the Bureau of Land Management, the United

1 States Geologic Survey and other engineers and other governmental and non-profit
 2 agencies. See, Natural Resources Defense Council v. Tennessee Valley Authority,
 3 340 F.Supp. 400 (S.D.N.Y.1971); and Levin v. Ruby Trading Corporation, 333 F.2d
 4 592 (2d Cir. 1964). In those cases the Court gave weight to the knowledge and
 5 expertise of those seeking intervention in its granting of their motion to intervene.
 6

7 Other factors to be considered in connection with permissive
 8 intervention are: the nature and extent of the intervenor's
 9 interest, whether the intervention will unduly delay or
 10 prejudice the adjudication of the rights of the original
 11 parties, whether the applicant will benefit by the
 12 intervention, whether the intervenor's interests are
 13 adequately represented by the other parties, and whether the
 14 intervenors will significantly contribute to the full
 15 development of the underlying factual issues in the suit and
 16 to the just and equitable adjudication of the legal questions
 17 presented. State of Utah v. Kennecott Corp., 801 F.Supp.
 18 553, 572 (D.Utah 1992).
 19

20 As discussed heretofore, granting intervention to Mineral County
 21 will in no way delay these proceedings. Granting intervention to Mineral County will
 22 add an aspect to the adjudication of the waters of Walker River that has been
 23 neglected to this point in history and is a very necessary consideration to save Walker
 24 Lake.
 25

26 III.

27 CONCLUSION

28 As stated hereinabove, Mineral County seeks intervention as of right or, in the
 alternative, as permissive intervention pursuant to Rule 24, F.R.C.P. For the

1 foregoing reasons, Mineral County respectfully requests that the Court grant its
2 motion for intervention.

1 NOW COMES, Plaintiff, MINERAL COUNTY, by and through its attorneys,
2 Zeh, Spoo and Hearne, and hereby moves the Court for a preliminary injunction,
3 under the authority of FRCP 65(a), enjoining all Defendant users of the Walker River
4 upstream of Walker Lake, and all those in active concert or participation with them,
5 from retaining and using the entirety of the flows from the Walker River and to allow,
6 specifically, approximately 260,000 acre feet of Walker River flows to reach the
7 Walker Lake at its inlet to raise the Lake to 3,946 feet above mean sea level in cal-
8 endar year 1995 and to allow, specifically, approximately 240,000 acre feet of Walker
9 River flows to reach the Walker Lake at its inlet to raise the Lake to 3,950 feet above
10 mean sea level, and, finally, to allow, specifically, approximately 117,000 acre feet
11 for each year thereafter so that Walker Lake will remain at 3,950 feet above mean sea
12 level until a final decree is entered by the Court in the present adjudication, C-125.

13
14
15
16 Unless Defendants are restrained and enjoined by order of this Court, Plaintiff
17 will suffer immediate and irreparable injury, loss, and damage in that the fishery at
18 Walker Lake will cease to exist without ability to rejuvenate, as more fully described
19 and set forth in the Affidavits of Herman Statt, Marlene Bunch, and Louis Thompson
20 previously filed with the Motion to Intervene dated October 25, 1994, and this Motion
21 for Preliminary Injunction and accompanying Affidavits of Kelvin Buchanan and

MEMORANDUM OF POINTS AND AUTHORITIES

INTRODUCTION

In April or May, the Spring trout-run up the Agai Hoop (Trout River) began. People from throughout the region gathered at the mouth of the river to fish . . . the fish runs were occasions for festivals¹

Since the memory of man, the history of Walker Lake has always included the fishery. Walker Lake has been, until very recently, a destination for those in search of trophy Cutthroat Trout. Today the levels are so low in the Walker Lake that the fishery will be lost if immediate action is not taken.

The essence of this dispute over Walker Lake is whether a lake with its incumbent economic benefits and environmental resources can demand water based on the fact that it exists as a natural resource preserved for the public versus whether irrigation with its incumbent economic benefits and private property rights can continue to exist based upon a law that was adopted over a century ago when agricultural and mining development was the only goal. Can both interests coexist? Not as they are presently managed on the Walker River system. The basic fact is either upstream uses change or Walker Lake ceases to exist as a fishery.

While these timely issues presented in this case (*i.e.*, whether C-125 has been properly enforced, whether irrigation conducted by 1936 methods is still beneficial

¹Johnson, *Walker River Paiutes, A Tribal History*, Walker River Paiute Tribe, 1975, p 9.

1 use, and whether the public trust allows the Court to allocate in-stream flows to
2 Walker Lake) wait to be resolved, Walker Lake will become a moot issue. Walker
3 Lake's existence as a viable fishery is at critical mass. Walker Lake cannot await the
4 outcome of a decade-long adjudication.
5

6 The Nevada Department of Wildlife has already forecast Walker Lake's fate.
7 Water to raise Walker Lake's levels is desperately needed or, according to nearly
8 every expert's opinion, within one year fish will not be able to survive. Just because
9 snowpack is above normal in 1995 provides no assurance that Walker Lake will
10 receive one drop of water. Without intervention from this Court, the 1995 snowpack
11 will be used to recharge groundwater reserves in Mason Valley, and replenish
12 Bridgeport, Topaz, and Weber reservoirs, but none will reach Walker Lake just as has
13 occurred since 1987.
14

15 Mineral County prays this Court to preserve Walker Lake, a natural resource
16 and remnant from the Pleistocene era. It is part of our history, part of our
17 environmental resources, and the mainstay of Mineral County's economy. Without
18 immediate relief, it will no longer be a viable issue in this case.
19
20
21
22

23 STATEMENT OF FACTS

24 The level of Walker Lake is presently 3,941.2 feet above sea level. The Total
25 Dissolved Solids are approximately 14,000 parts per million (ppm). This is
26 approaching the level at which tui chub eggs die (approximately 15,500 ppm) and
27 close to the level where trout will die (approximately 16,000 ppm). This dramatic
28

1 scenario is being played out at Walker Lake as evidenced by the 93.3% of stocked
2 fish sampled, which died in 1994. (See, Affidavit of Kelvin J. Buchanan attached.)

3
4 While some geologists debate whether or not Walker Lake did actually dry out
5 nearly 14,000 years ago,² nonetheless if it did, fluvial circumstances existed
6 immediately after that time to allow a rejuvenation of the Lake and it's fishery.
7 Human intervention has since occurred that severs that inherent rejuvenation character
8 of the River from the Lake. Topaz and Weber Reservoirs now exist to impede the
9 ability of fish to reach Walker Lake to reestablish colonies. If Walker Lake ceases to
10 be a viable fishery, no biologist can guarantee that it can ever be rejuvenated. (See,
11 Affidavit of G. Vinyard attached.)
12

13
14 No meaningful flows from Walker River have reached to Walker Lake since
15 1987. (See, Affidavit of Kelvin J. Buchanan attached.) Upstream are three man-made
16 reservoirs, one of which is required by the State of California to retain minimum
17 levels, an allocation not contemplated by C-125. Good and efficient water
18 management is hampered by present irrigation practices and facilities and Walker
19 River Irrigation District (hereinafter "WRID") has not implemented recommended
20 improvement projects. (U.S. Department of Agriculture, *Final Watershed Plan and*
21
22

23
24 ² There is some evidence that the Walker Lake basin held a deep lake between at
25 least 32,000 and 25,000 years ago, and even better evidence that Walker Lake was not
26 a lake at all between about 22,000 and 14,000 years ago, when the basin was occupied
27 by a salt marsh. During this interval, it appears that the Walker river was flowing not
28 into Walker Lake, but instead north into the Carson Basin, where a sizeable lake then
existed....reconstruction has Lake Lahontan so high at 14,000 years ago that it
incorporated the Walker Lake Basin. Grayson, *The Desert's Past*, Smithsonian
Institution, 1993, p. 96.

1 *Environmental Impact Statement, East Walker Watershed*, August 1989.) No one
 2 would contemplate that irrigation practices would not substantially improve since
 3 1936. Many more acres are being irrigated with the granted storage rights than were
 4 contemplated at the time of the earlier decree in 'C-125. (Headley, *Economic Study of*
 5 *Walker River Irrigation District*, October 1933 [available at UNR library]). The
 6 Walker River Paiute Tribe (hereinafter "Tribe") has constructed a non-permitted
 7 reservoir not contemplated in C-125 that inhibits any remaining waters from flowing
 8 through the reservation to Walker Lake.³

12 LEGAL ARGUMENT

14 **I. Mineral County Can Prove That Grave Irreparable 15 Harm, the Loss of Walker Lake as a Viable Fishery, 16 Will Occur Unless Preliminary Injunctive Relief Is 17 Granted.**

18 **A. Without a Court Ordered Infusion of 19 Water from the Walker River, Walker 20 Lake Can Not Survive Because Walker 21 River Is the Major Source of Water for 22 Walker Lake.**

23 The United States Court of Appeals, Ninth Circuit has adopted a
 24 standard employed in deciding whether to grant a preliminary injunction. These two
 25 tests for issuance of a preliminary injunction "are not separate, but rather represent the
 26 outer reaches of a single continuum." Los Angeles Memorial Coliseum v. National
Football League, 634 F.2d 1197, 1201 (9th Cir.1980).

27 ³ Mineral County makes no allegation that the Tribe has retained more than its
 28 entitlement of reserved water rights.

1 At one end of the continuum, the moving party is required
2 to show both a probability of success on the merits and the
3 possibility of irreparable injury. Lopez v. Heckler, 713
4 F.2d 1432, 1435 (9th Cir. 1983).
5

6
7 The retention of flows upstream have deprived Walker Lake of
8 substantially all of the rejuvenating waters from Walker River. Walker Lake has no
9 other source of sufficient quantity to replenish it.⁴ Walker Lake, presently at a critical
10 level of 3,941.2 feet above sea level, will suffer irreparable harm unless this Court
11 grants Mineral County a preliminary injunction on behalf of Walker Lake mandating
12 that a duty of approximately 260,000 acre feet reach the Lake in 1995 to bring the
13 Lake to 3,946 feet above mean sea level, and approximately 240,000 acre feet in 1996
14 to bring the Lake to 3,950 feet above mean sea level, the 1992 level, and finally a
15 duty of 117,000 acre feet for each year thereafter so that Walker Lake will survive as
16 a fishery until the reallocation of the waters of Walker River are completed. (See,
17 Affidavit of Kelvin J. Buchanan attached.)
18
19
20

21 Environmental injury, by its nature, can seldom be
22 adequately remedied by money damages and is often
23 permanent or at least of long duration, i.e. irreparable. If
24 such injury is sufficiently likely, therefore, the balance of
25
26

27 ⁴ As I have mentioned, Walker River provides 83% of the inflow to Walker Lake.
28 Without that source, Walker Lake would be a puddle.
Grayson, *The Desert's Past*, *supra*, p. 96.

1 harms will usually favor the issuance of an injunction to
2 protect the environment. Amoco Prod. v. Village of
3 Gambell, Alaska, 480 U.S. 531, 545, 107 S.Ct. 1396,
4 1404, 94 L.Ed.2d 542 (1987); see, also, Seattle Audobon
5 Society v. Mosley, 798 F.Supp. 1484, 1491 (W.D. Wash.
6 1992) and Public Interest Research Group of New Jersey v.
7 Star Enterprise, 71 F.Supp. 655 (D.N.J. 1991).

11 The critical nature of the levels of Walker Lake and its
12 dependence on the Walker River provide overwhelming evidence of irreparable harm.
13 The length of the adjudication itself, now in its fourth year, is a factor that must also
14 be considered. Nothing would be more convenient to the upstream users than a delay
15 until Walker Lake's fishery is gone and to thus eliminate Walker Lake as a potential
16 party to any reallocation of the waters of Walker River.

19 Granting the preliminary injunction in this matter will keep the
20 subject of the plaintiff's request "alive" until the Court has the opportunity to review
21 important issues in Western water law that have and will continue to be reexamined
22 based upon the necessary adjustment of an old legal system to changing public
23 pressures.⁵

25 / / /

27 _____
28 ⁵ Blumm, *Public Property and the Democratization of Western Water Law: A Modern View of the Public Trust Doctrine*, 19 Environmental Law 573, Summer 1989.

1 Thus, this Court must choose the course of action that will
2 minimize the costs of being mistaken. DiDamenico v.
3 Employers Cooperative Industry Trust, 676 F.Supp. 903,
4 907 (N.D.Ind. 19877).

16
17
18
19
20
21
22
23
24
25
26
27
28
Allowing Walker Lake to survive is the only means to keep these
important issues ripe and for the Court's decision to be meaningful.

In the present matter, it is clear beyond peradventure of
doubt that plaintiff has established that he will suffer
irreparable harm absent preliminary relief. This is not a
case where plaintiff can wait until after trial for a remedy.
Simply put, absent some form of preliminary relief plaintiff
runs the real risk of dying. DiDomenico v. Employers
Cooperative Industry Trust, supra, p. 407.

Just as the patient in DiDomenico, supra, a judgment in favor of Mineral County at
the close of the adjudication would be hollow if the Walker Lake fishery was already
lost.

Not only would irreparable harm be suffered by the loss of such a
historic and scenic remnant of the ice age gracing the Walker Lake Basin, but Mineral
County, plaintiff herein, would lose fifty (50) percent of its economic base. (See,
"Statement of Bunch", Mineral County's Motion to Intervene, filed 10/25/94.)

ZEH, SPOO & HEARNE

Phone: (702) 323-4599 • Fax (702) 786-8183

1 Under some circumstances, loss of business threatening the
2 very existence of an enterprise constitutes irreparable injury
3 sufficient to justify the issuance of a preliminary injunction.
4

5 In Doran v. Salem Inn, Inc., 422 U.S. 922,932, 95 S.Ct.

6 2561, 2568, 45 L.Ed.2d 648 (1975), the (U.S. Supreme)

7 Court concluded that the district court had not abused its

8 discretion in granting preliminary injunctive relief: "As

9 required to support such relief, these respondents alleged...

10 that absent preliminary relief they would suffer a substantial

11 loss of business and perhaps even bankruptcy. Certainly,

12 the latter type of injury meets the standards for granting

13 interim relief, for otherwise a favorable final judgment

14 might well be useless. Assoc. Prod. Company v. City of

15 Independence, Missouri, 648 F.Supp. 1255, 1258

16 (W.D.Mo. 1986).
17
18
19
20

21 Mineral County has a small population, 15,000 residents, and an
22 even smaller economic base. (See, Affidavits of Marlene Bunch and Louis
23 Thompson, in Mineral County's Motion for Intervention, filed 10/25/94). With the
24 considerable downsizing of the Hawthorne depot, Walker Lake has indeed become the
25 mainstay of the economy of the citizens that Mineral County represents. With little
26
27
28

///

1 else to develop, Mineral County must have a viable fishery at Walker Lake or suffer
2 serious economic consequences to the County government.
3
4

5 **B. Mineral County Raises Serious Legal**
6 **Questions and the Balance of Hardships**
7 **Tips Sharply in Favor of Granting a**
8 **Preliminary Mandatory Injunction.**

9 Mineral County has shown the requisite irreparable harm and:

10 At the other end of the continuum, the moving party must
11 demonstrate that serious legal questions are raised so that
12 the balance of hardships tips sharply in its favor

13 Lopez v. Heckler, supra, p. 1435. (Emphasis added.)
14

15
16 Serious legal questions challenge the strict application of prior
17 appropriation in the allocation of water rights adopted in most Western States. (Beck,
18 *Waters and Water Rights*, Vol. 2, The Mische Co., 1991). The basis of prior
19 appropriation is to divert the water and apply it to its most beneficial use.
20

21 NRS 533.380 Because priorities in national policy in the latter half of the twentieth
22 century have supported environmental protection and preservation of our natural
23 resources, conflicts with traditional beneficial uses (i.e. agriculture, mining,
24 municipal), of prior appropriation are widespread.
25

26 Those challenging the private rights of appropriation have first
27 looked to the nature of the water right. Since a party cannot possess certain
28

 450 Marsh Avenue • Reno, NV 89509
 Phone: (702) 323-4599 • Fax (702) 786-8183

1 identifiable water, the term "usufructuary"⁶ best describes the right incumbent to a
 2 water certificate. The right to use water means it is a usufructuary right rather than a
 3 possessory right. However, for example, no one has a right to use water and return it
 4 so polluted as to cause a degradation to the environment. (33 USC, Section 1251, et.
 5 seq. commonly referred to as the Clean Water Act, which has been adopted by
 6 Nevada as NRS, Section 445.131 et. seq.) Just as the deposition of foreign and toxic
 7 materials causes pollution to the water, so also the excessive withdrawal of natural
 8 flows significantly diminishes the quality of the water. Mineral County will
 9 vigorously argue that but for the excessive withdrawals upstream, Walker Lake would
 10 be a viable fishery into the future.

11
 12 Recently, the United States Supreme Court found that minimum
 13 stream flows could be required in order to enforce a state water quality standard.
 14 PUD No. 1 of Jefferson County and City of Tacoma v. Washington Dept. of Ecology,
 15 114 S.Ct. 1900 (1994). This case officially memorializes the significant link between
 16 water quality as it is affected by water quantity. This concept of protecting water
 17 quality by insuring sufficient quantity is elemental to present interpretations of the
 18 public trust doctrine as it has been judicially imposed in favor of minimum flows.
 19 Some Western States have codified public trust doctrine principles or, at least
 20
 21
 22
 23

24
 25 ⁶Usufructuary - "It is laid down by our law writers, that the right of property in
 26 water is usufructuary, and consists not so much of the fluid itself as the advantage of its
 27 use. (Eddy v. Simpson (1853) 3 Cal. 249, 252) Hence, the cases do not speak of the
 28 ownership of water, but only of the right to its use. (Rancho Santa Margarita v. Vail
 (1938) 11 Cal.2d 501, 554-555 [81 P2d. 553] [cites]. United States v. State Water
Resources Control Board, 182 Cal.App.3d 82, 227 Cal.Rptr. 161, 168 (Cal.App. 1
 Dist. 1986)

1 expanded "beneficial use" definitions to include recreation, preservation of wildlife
2 and minimum stream flows.⁷

3
4 One of the seminal cases upon which the public trust doctrine has
5 developed stated that the beds of navigable water are:

6 . . . held in trust for the people of the State that they may
7 enjoy the navigation of the waters, carry on commerce over
8 them, and have liberty of fishing therein freed from the
9 obstruction or interference of private parties. Illinois
10 Central Railroad v. Illinois, 146 U.S. 387, 452 (1892).

11
12 Likewise, Nevada has recognized the public's interest in water resources, "The water
13 of all sources of water supply within the boundaries of the state whether above or
14 beneath the surface of the ground, belongs to the public." Bergman v. Kearney, 241
15 F.884, 893 (D.Nev.1917); NRS, 533.025.

16
17 This concept of the public right to preservation of water resources has been
18 expanded in many Western States as population and demands on water grew. Both
19 the judiciary and state legislative bodies have turned to the public trust doctrine as
20 protection for non-navigable streams and lakes as well. National Audubon Soc. v.
21 Superior Court, 33 Ca.3d 419, 658 P.2d 709, 189 Cal.Rptr. 346 (Cal.App. 3
22
23
24
25
26

27 ⁷ Cal.Water Code, Section 1243 (1971, 1989); Wash. Rev. Code Ann., Sections
28 90.22 and 90.54; Or. Rev. Stat., Section 537.332(2)(1987); Idaho Code, Section 36-
1601(1977); NRS, Section 501.100(2) and 501.181(3)(c), 533.367.

1 Dist.1981), cert. denied, 464 U.S. 977 (1983). See, also, Montana Coalition for
 2 Stream Access v. Hildreth, 684 P.2d 1085 (Mont.1984), CWC Fisheries v. Bunker,
 3 755 P.2d 1115 (Alaska 1988), Kootenai Env'tl. Alliance v. Panhandle Yacht Club, 105
 4 Idaho 622, 671 P.2d 1088 (1983).

5
 6 The problem is really quite simple, it does not require
 7 mastery of abstruse legal doctrines to appreciate what is
 8 going on. The heart of the matter is that public values have
 9 changed, and the use of water has reached some critical
 10 limits. One result is that we need to retrieve some water
 11 from traditional water users to sustain streams and lakes as
 12 natural systems and to protect water quality. Sax, Joseph
 13 L., *The Limits of Private Rights in Public Waters*, 19
 14 Environmental Law 473 (1989).

15
 16 Both States involved in the present adjudication have begun to
 17 temper the harsh rules of prior appropriation in recognition of their public trust
 18 responsibilities.

19
 20
 21
 22
 23 California:

24 Once the state has approved an appropriation, the public
 25 trust imposes a duty of continuing supervision over the
 26 taking and use of appropriated water. In exercising its
 27 sovereign power to allocate water resources in the public
 28

1 interest, the state is not confined by past allocation decisions
 2 which may be incorrect in light of current knowledge or
 3 inconsistent with current needs. National Audubon Society
 4 v. Superior Court, supra, p. 447.

6 Nevada:

7 Nevada law recognizes the recreational value of wildlife,
 8 NRS 501.100(2) and the need to provide wildlife with
 9 water. See, NRS 501.181(3)(c), 533.367. State v. Morros,
 10 766 P.2d 263, 268 (Nev. 1988).

12 In State v. Morros the court recognized the very heart of the
 13 public trust controversy - what is beneficial use.⁸ The court found that an
 14 appropriation "for public recreation and fishery purposes" was a beneficial use. State
 15 v. Morros, supra, p. 265, 266. Beneficial use is the basis of perfection of a water
 16 right. NRS 533.360 The definition of beneficial use has evolved since prior
 17 appropriation was adopted. In earlier cases and statutes, beneficial use was more or
 18 less the diversion and application of water to agriculture, mining, industrial or
 19 municipal use.

22 ///

24
 25 ⁸One of the primary challenges to agricultural use as "beneficial use" is whether the
 26 challenges can prove that agricultural irrigation is "waste." This is one of the critical
 27 factors in U.S. v. Alpine Land and Reservoir Co., supra at p. 855, "the issue we
 28 review is whether the district court reached a correct determination of beneficial use as
 of 1980." The Court went on to refer to the agricultural use as "relatively inefficient."
 Mineral County will vigorously argue that improved irrigation technology is "beneficial
 use," not outdated, inefficient, and wasteful irrigation methods.

1 The Court of Appeals, Ninth Circuit, determined that although
2 beneficial use is mainly determined by State law, that beneficial use "expresses a
3 dynamic concept, which is a variable according to circumstances," and that " a district
4 court in a quiet title action should determine beneficial use on the best current
5 evidence available." U.S. v. Alpine Land and Reservoir Co., 697 F2d. 851, 855 (9th
6 Cir.1983).
7

8 The best evidence available to the court in the instant case is that
9 beneficial use should include public trust concepts that would allow dedication of
10 water to in-stream flows through Walker River to Walker Lake. Mineral County will
11 be irreparably harmed by the loss of the Walker Lake fishery and that the legal issues
12 are so persuasive that a preliminary mandatory injunction should be granted allowing a
13 water duty in the Walker River in favor of Walker Lake. Mineral County seeks this
14 injunction to preserve the corpus while the parties argue the benefits of imposing a
15 public trust in favor of the Lake.
16
17

18 For the purposes of injunctive relief "serious questions"
19 refers to questions which cannot be resolved one way or the
20 other at the hearing on the injunction.....Serious questions
21 need not promise a certainty of success, nor even present a
22 probability of success, but must involve a fair chance of
23 success on the merits. (citing National Wildlife Fed'n v.
24 Coston, 773 F.2d 1513, 1517 (9th Cir.1985). Republic of
25
26
27

28 ///

1 the Philippines v. Marcos, 862 F.2d 1355, 1362 (9th Cir.
2 1988).

3
4
5 Mineral County has a fair chance of success on the merits of a very complicated issue.
6 (An issue not without successful precedent.) Mineral County has met its burden and
7 shown serious threat of irreparable harm so that the hardship tips very sharply in favor
8 of the grant of the preliminary injunction.
9

10
11 **II. Mineral County Has Satisfied the Criteria for Grant of a**
12 **Preliminary Mandatory Injunction and the Grant Is**
13 **Necessary to Prevent Injury.**

14 Mandatory injunctive relief is "an extraordinary remedy that should be
15 granted only under compelling circumstances and in a limited manner to restore the
16 status quo." Golden State Transit Corp. v. City of Los Angeles, 660 F.Supp. 571,
17 575, (C.D.Cal. 1987). Mineral County has shown the irreparable harm of the loss of
18 flows to Walker Lake and the threat that the fishery may not be capable of
19 rejuvenation.
20

21 A mandatory injunction may be issued if the status quo is a
22 condition not of rest, but of action, and the condition of rest
23 is exactly what will inflict the irreparable injury upon
24 complainant. United States v. Malibu Beach, Inc., 711
25 F.Supp. 1301, 1310 (D.N.J. 1989).
26
27

28 ///

1 The court in U.S. v. Malibu Beach, *supra*, granted a preliminary
2 mandatory injunction because of "irreparable harm to the environment." Much like
3 the circumstances in the instant case the court found that "equitable relief is
4 appropriate here because there is no adequate remedy at law to compensate the public
5 for the harm caused" U.S. v. Malibu Beach, Inc., *supra*, p. 1312, 1313.
6

7 The Court of Appeals, Ninth Circuit, has applied the standards for
8 issuance of a preliminary injunction when the sensitive environment at Lake Tahoe
9 was threatened. "The district court has greater power to fashion equitable relief in
10 defense of the public interest than it has when only private interests are involved."
11 People of the State of California ex rel. Van de Kamp v. Tahoe Regional Planning
12 Agency, 766 F2d 1319, 1324 (9th Cir. 1985).
13

14 The harm to Mineral County far outweighs the harm to defendants.
15
16 Without the flows to Walker Lake, the Lake will cease to be the long standing fishery
17 it is noted to be. The Defendants on the other hand will merely have to release waters
18 that otherwise would replenish groundwater in Mason Valley and increase storage
19 levels in Bridgeport, Topaz and Weber man-made reservoirs to insure that in the event
20 next year is a low precipitation year that extra water is available. (See particularly,
21 Ex. F. of the Affidavit of K. Buchanan) Loss of insurance for future years is much
22 less critical a burden to bear than the total loss of a substantial economic and
23 environmental resource such as Walker Lake that has existed for a millennium.
24

25
26 ///

27
28 ///

1 The Court has the power to fashion this equitable remedy. The
2 Watermaster can be directed to release flows, a very simple action to administer with
3 little monitoring by the Court and the public interest will be served.
4

5
6 WHEREFORE the above stated reasons Mineral County, plaintiff herein,
7 requests that this Court issue a preliminary injunction that will allow flows to reach
8 Walker Lake to raise the Lake to 1992 levels as set out more fully hereinabove.

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF NEVADA

UNITED STATES OF AMERICA,

Plaintiff,

WALKER RIVER PAIUTE
TRIBE,

Plaintiff-Intervenor,

vs.

WALKER RIVER IRRIGATION
DISTRICT, a corporation, et al.

Defendants.

IN EQUITY NO. C-125-C-ECR

SECOND AFFIDAVIT OF
KELVIN J. BUCHANAN,
P.E.

STATE OF NEVADA

COUNTY OF WASHOE

)
) ss.
)

I, Kelvin J. Buchanan, being duly sworn, hereby state that:

1. I am a Professional Geological Engineer registered in the State of Nevada.

I have practiced in Nevada for twenty (20) years, have worked in groundwater related issues in Nevada and other states and have taken continuing education in groundwater and related subjects from time to time.

2. I have researched and compiled documents and papers authored by the U.S. Geological Survey (USGS), the Nevada Department of Wildlife (NDOW), the U.S.

1 Bureau of Reclamation, the Nevada State Engineers' office, the California Division of
2 Water Resources and the U.S. Department of Agriculture, Soil Conservation Division. I
3 have studied Federal Decree C-125, and prior decree 731 as well as reviewing scientific
4 papers which include, but are not limited to, those authored by Alex Horne, limnologist
5 and Mike Sevon, NDOW biologist. I have traversed the East and West Walker River
6 systems from Upper and Lower Twin Lakes to Walker Lake. I have personal knowledge
7 of the facts contained herein and, if called as a witness, I could testify competently hereto.

8 3. I have personally visited USGS gauge station sites on the Walker River
9 system and the WRID reservoirs at Bridgeport and Topaz Lake at various times in 1994
10 and 1995 to familiarize myself with the visual appearance of what the reported volume of
11 river flows at the time were. During a six (6) day period in February, 1995, three visits
12 were made. The terminal gauging station on the Walker River is located at Wabuska, at the
13 boundary of the Walker River Paiute Reservation. I was told (Sam Stegeman, Engineer,
14 Walker River Paiute Tribe, personal communication) that a new gauge was being installed
15 by the USGS on tribal land at the head of Weber Reservoir, but I have not seen it. I was
16 also told by Mr. Stegeman that he had personally supervised the release of 5,100 acre feet
17 of water from Weber Reservoir during November, 1993 and that to his knowledge, no
18 river water other than this release, had to date made it to Walker Lake since 1987. Mr.
19 Stegeman also indicated that unless he could be assured of sufficient deliveries of river
20 water in 1995, he would be unlikely to release any water from Weber Reservoir to the
21 Walker Lake.

22 4. I have personally observed and photographed irrigation (stock ditches)
23 canals in Mason Valley flowing with water diverted from both the East and West Walker
24 Rivers (Attachment C, Ditch Map, USDA). At least two (2) of the canals, the Greenwood
25 and Hall ditches diverted from the East Walker, do not return to the river but terminate east
26 and south of Yerington. A third canal, the Mickey, returns to the main Walker River
27 channel south west of Yerington (Attachment D, Photographs). On February 2, 1995, I
28 observed the Greenwood, Hall and Mickey Ditches running vigorously at a point near the

1 junction of Highway 208 and the East Walker River Road. I proceeded to follow the flow
2 of Greenwood Ditch for approximately two miles. I observed that in addition to flowing
3 alongside fallow fields, it also went through one small stockyard between the house and the
4 barn. On a visit to the USDA Soil Conservation Service office in Yerington later that day, I
5 was told that these stock ditches diverted water from the river and returned to the river
6 (Dick Franklin, USDA Soil Conservation Service, personal communication).

7 On February 5, I observed that while the flow in the Mickey Ditch was not
8 diminished, the flow to the Greenwood Ditch was diminished and the Hall Ditch had pools
9 of standing water. On the same day (see Attachment D), I observed that diversion from the
10 West Walker River were also occurring. The Lee-Sanders Ditch and the Tunnel Ditch had
11 significant flows (see photographs) close to their diversion point where the West Walker
12 River exits from Wilson Canyon. The Lee-Sanders Ditch does not return to the river
13 system; the Tunnel Ditch crosses the south end of Mason Valley and is intercepted by the
14 West Strosnider Ditch just before it reaches the East Walker River.

15 On February 7, 1995 I observed that the flow in both the Greenwood and Hall
16 Ditches had ceased. Indeed, both ditch beds were bone dry including the section through
17 the stock yard noted above. The Mickey, Lee - Sanders and Tunnel Ditches appeared to be
18 contain about the same amount of water and were flowing at the same rate as on February
19 2, 1995. I could not discern any change in the flow of these ditches during this six day
20 period.

21 Divisions of river water which do not return to the river not only serve to deprive
22 the river of stream flow, but will augment the underlying ground water table where these
23 flows occur. Multitude diversions from a river channel, some of which do not return to the
24 river, create a situation analogous to a "braided stream" where groundwater capture,
25 evaporation and phreatophyte growth rob the river of its natural flow. Unless there is
26 equilibrium in the system, surface water will be subject to groundwater capture. Because
27 of significant groundwater pumping over the last eight (8) drought years, no such
28 equilibrium exists. I have been unable to find any mention of specific diversion from the

1 river to individual ditches, other than the general term "stock ditches", that apply from C-
2 125 or 731. There does not appear to be a minimum or maximum amount of water that
3 flows in these ditches or what irrigation ditches are also considered stock ditches. I have
4 no idea why the Hall and Greenwood Ditches should be flowing and then suddenly cease
5 to flow in early February. The livestock I observed still needed water.

6 I conclude that, notwithstanding the purpose of irrigation ditches flowing during the
7 winter months, that water from these ditches, and especially no-return ditches, rob the river
8 of its' natural flow and augment the groundwater table to the ultimate detriment of Walker
9 Lake.

10 5. I concur with the *Office of Assessment Technology Memorandum, August*
11 *1993*, that the diversions in the Walker River Irrigation District (WRID) source areas are
12 not technically efficient and that irrigation ditches should be lined with impervious material
13 to prevent leakage. [REDACTED] Despite this assessment, WRID has this year allowed
14 to lapse, a matching funds project authored by the USDA Soil Conservation Service, which
15 would have significantly improved the delivery system of irrigation water (Mark
16 Twyeffort, USDA Soil Conservation Service, personal communication).

17 6. I concur with the finding of the report, *Walker River Basin Water Rights Model,*
18 *Nevada Department of Conservation and Resources, June 1993*, that the readings derived
19 for the inflow into the Walker Lake from the Walker River represent 84% of the lake's
20 recharge during the period 1961-1990 and that if the lake continues to receive less than
21 84% of this recharge from the Walker River, all fish life in the lake will be poisoned by the
22 high levels of total dissolved solids. [REDACTED] I also concur with data collected by
23 NDOW that this level of toxicity is imminent and that the level of Total Dissolved Solids
24 (TDS) has reached of 14,000 parts per million (ppm). (see Attachment E, graphics derived
25 from NDOW and personal communication, John Elliot, NDOW). The level of the lake has
26 dropped since this report was authored to a level of 3941.2 feet above sea level in February
27 of 1995. The average amount of water the lake received during the period 1961-1990 was
28 103,000 acre feet, which slowed the overall fall of the lake level, but did not halt it. To

1 maintain the Walker Lake at its present level, the Lake requires an average of 117,000 acre
2 feet of water per annum to counteract yearly evaporation. To reduce the level of TDS to
3 approximately 13,000 ppm TDS, the lake would have to rise about 15 feet to a level of
4 3,955 feet (see Attachment E). The amount of additional acre feet of water the Lake would
5 have to receive in 1995 to bring the Lake to this level from 3941.2 feet is 495,000 acre feet.
6 The total amount of water required to bring the Lake to this level by December 1995 would
7 612,000 acre feet. Only in the flood year of 1983 did the amount of water entering the
8 Walker Lake from the Walker River approach this amount.

9 7. The Walker River has lost a number of gauge stations over the past 20 years
10 through deactivation caused by lack of funding and additionally, there has never been a
11 gauge station within 10 miles of the delta of the Walker Lake (personal communication, Jim
12 Thomas, USGS). It has and will continue to be, very difficult if not impossible, to
13 ascertain the amount of water that reaches the Lake on a yearly basis without adequate
14 gauges. Most scientists agree that rather on relying on a variable flow which is difficult to
15 measure, a minimum guaranteed level such as has been worked out for Mono Lake in
16 California would be more practical to preserve Walker Lakes' viability (personal
17 communication, Gary L. Vinyard, University of Nevada). If the guaranteed level of the
18 Lake were brought back to 1986 levels, it could result in not only a thriving fishery, but in
19 a return of the power boat races which brought tourist revenue to Mineral County until they
20 were canceled three years ago because of high alkalinity in the Lake (personal
21 communication, Lou Thompson, Walker Lake Working Group).

22 8. Storage rights for water on the West Walker River were originally assigned
23 under permit number 5528 on June 6, 1919. Total acreage allowed to be irrigated under
24 this permit is 30,000 acres. Total acre feet allowed stored is 89,612 acre feet. The permit
25 was not issued until April 27, 1971. Certificate number 8859 proving beneficial use was
26 issued on October 15, 1976. Water is controlled and distributed by the Walker River
27 Irrigation District (personal communication, Steve Walmsley, Office of the State Engineer).

1. Most irrigated land in northwestern Nevada is granted and needs at least 4 acre feet
2 per acre of water rights to grow crops. It is possible to irrigate with 3.5 acre feet of water
3 per acre as is being done in Fallon, Nevada using drip irrigation (personal communication,
4 Mark Twyeffort) on an experimental basis. 89,612 acre feet of water could effectively
5 irrigate 22,400 acres, but could not effectively irrigate 30,000 acres because this would be
6 less than 3 acre feet of water per acre, an amount that is not sufficient to economically
7 irrigate cropland.

vs.)

WALKER RIVER IRRIGATION)
 DISTRICT, a corporation, et al.)

Defendants.)

STATE OF NEVADA)
) ss.
 COUNTY OF WASHOE)

I, Dr. Gary L. Vinyard, being duly sworn, hereby state that:

///

1 1. I have a doctorate in Systematics and Ecology. I have taught sixteen
2 (16) years at the University of Nevada, Reno. My special interests and research have
3 been Aquatic Ecology.

4 2. My knowledge of Walker Lake includes study and personal observation.
5 From this information I have formulated the following opinions. I have personal
6 knowledge of the facts stated herein and, if called as a witness, I could testify
7 competently thereto.
8

9 3. Walker Lake is a naturally occurring section of the Lake Lahontan that
10 existed in Pliestocene age. The only other remnants of Lake Lahontan are Pyramid
11 Lake and Honey Lake.
12

13 4. Desert lakes have a very tenuous existence because of the vagaries of
14 climactic change and development. If lake levels drop, the total dissolved solids
15 increase significantly causing high concentrations of alkalinity and salts in the water.
16 Once high concentrations of dissolved materials reach certain levels, all vertebrate fish
17 life ceases to exist. Although the Pyramid cui-cui, Tahoe sucker, tui chub and
18 cuthroat trout are species that tolerate higher levels of alkalinity/salinity, even these
19 species will perish. An indication that this is already occurring in Walker Lake is the
20 reduction in average fish size and longevity.
21

22 5. Walker Lake will shift from a vertebrate dominated community to an
23 invertebrate dominated community. This means that fish will not continue to inhabit
24 the Lake and it will become dominated by certain invertebrates, such as fairy shrimp,
25 tadpole shrimp and clam shrimp.
26
27
28

1 6. Fish are a major food source for numerous bird species, including loons,
2 pelicans, swans, geese, grebs, ducks, etc. These migratory water fowl will cease to
3 visit the Lake and will be forced to find other sustenance. Because these birds utilize
4 Walker Lake as an important rest stop during migration, loss of the fishery resource
5 could adversely affect these bird populations.
6

7 7. Hawthorne has an annual loon festival to celebrate the arrival of the
8 loons in late winter.
9

10 8. It is widely believed that Walker Lake may have totally dried up nearly
11 6,000 years ago because the Walker River changed course for a time and terminated
12 in Carson sink rather than in Walker Lake. Recolonization of Walker Lake vertebrate
13 population was possible after this time because the Walker River, continued to retain
14 viable fish populations necessary for recolonization. These fish then regained access
15 to Walker Lake when the river returned to its' present channel. Recolonization for
16 fluvial populations is no longer possible because of changes which have occurred in
17 the lower Walker River, including construction of Weber Reservoir, dewatering of the
18 river between Weber Reservoir and Walker Lake and alterations of fish populations in
19 the river.
20
21

22 9. If fish populations disappear from the Lake, it will take several years to
23 reestablish populations of tui chub, Tahoe suckers and cutthroat trout in the Lake.
24 Once the existing fish-dominated community in Walker Lake is lost, reestablishment
25 of viable fish populations capable of sustaining a recreational fishery would be
26 dependent on several factors. First, physical and chemical conditions in the Lake
27
28

1 would need to be restored. Subsequently, viable populations of fishes and their food
 2 resources would need to be reestablished. No entity that I am aware of supplies tui
 3 chub or Tahoe suckers for stocking purposes at this time.
 4

5 10. There are no comparable natural resources equivalent to Walker and
 6 Pyramid Lakes. These are geologic remnants of a prehistoric lake that existed over
 7 this area. Once lost, no biologist could guarantee that this Lake can be returned to its
 8 present state.

WALKER LAKE PROPOSAL

INTRODUCTION

The purpose of this proposal is to provide in excess of 100,000 acre feet to Walker Lake during 1995.

The Walker River watershed is reported to have 113% of the average yearly snowpack water content in data collected by the USDA on February 14, 1995. The average water content of the snowpack as calculated by the USGS in the Walker River Basin in readings taken from their Coleville Gauge (55 year record) on the West Walker River and the Bridgeport Gauge (71 year record) on the East Walker River totals 287,300 acre feet. Even if there was no further precipitation between February 14 and April 1, 1995, the end of the winter season, the run-off would total 324,000 acre feet. Since the possibility of no further significant precipitation is statistically improbable, a more realistic estimation of potential run-off would be to use a model which predicts that the balance of the season would be normal. This model suggests that the Walker River basin would receive an additional 86,000 acre feet by April 1, 1995 for a total snowpack water content of 410,000 acre feet.

Walker Lake has, except for a release of 5,100 acre feet from Webber Reservoir during the spring of 1993¹, received no water from the Walker River since 1988 and is dropping at the rate of 4 feet per year. The total dissolved solids in Walker Lake are approaching toxic levels for fish life (present level 14,000 TDS) and Walker Lake has declined in elevation to 3,941.2 feet ASL. Survival rates for new hatchery fish in 1993 were estimated at less than 7% by NDW. Fish survival rates for fish presently in the lake are estimated at between 2 and 3 years; growth of fish is negligible during this time and if the TDS content rises to a count of 15,000, then all fish life will cease to exist.²

1. Pers. Comm., Sam Stegeman, Engineer, Walker River Paiute Tribe, February 7, 1995
2. Pers. Comm., John Elliot, Nevada Division of Wildlife, February 2, 1995

That Walker Lake is close to dying is not the question. The question is, does any entity other than Mineral County, who has lost 20% of their tax base already due to lake diminution and has potential losses of 50% should the lake die, be the only party concerned with its demise?

The proposal submitted is meant as a rescue package for the year 1995 to stabilize the lake level while having little or no impact on upstream users. Recreational users on Topaz and Bridgeport Reservoirs must be able to enjoy the facilities with no degradation as to launching facilities and sport fishing. Irrigated acres in Smith and Mason valleys should receive their full allotment. The Walker River Paiute Tribe will receive their full allotment, which has not always been the case, and unlike past years, they will release most of this water through to the lake.

A possible benefit to the town of Yerington is the controlled scouring of the Walker River channel in the Mason Valley. The concern of high sudden run-off has prompted WRID and the Lyon County Commissioners to submit a request to the Corps of Engineers requesting that they clear the channel of debris. No response has been received to this date. The last time the channel was cleared, it was by natural causes when the Walker River flooded in 1983. A controlled release could help alleviate these concerns, especially for those living in areas flooded in 1983.

PROPOSED RELEASE SCHEDULE, BRIDGEPORT AND TOPAZ RESERVOIRS

Walker Lake will receive more net water from the Walker River system if the proposed release schedule is followed for two reasons. There will be less water loss to groundwater recharge in Smith and Mason Valleys because some of the water released is prior to the effective date of the irrigation season. Additionally, there will be less water lost to evaporation over the system; the premise is that water evaporation at Walker Lake is more or less constant and there is no point waiting for water to evaporate from Bridgeport, Topaz, Artesia and Webber as well.

The following schedule assumes an average precipitation period from February 14 through April 1, 1995.

TOPAZ RESERVOIR

Storage: 13,500 acre feet as of February 1, 1995³

Month	Proposed Discharge	Reservoir Storage	Acre feet Release(month)
March	200 c.f.s.	13,500 a.f.	12,000
April	250 c.f.s.	14,500 a.f.	15,000
May	850 c.f.s.	20,500 a.f.	51,000
June	850 c.f.s.	48,500 a.f.	51,000
July	750 c.f.s.	46,000 a.f.	45,000
August	400 c.f.s.	30,000 a.f.	24,000
September	300 c.f.s.	16,000 a.f.	18,000
October	150 c.f.s.	11,000 a.f.	9,000

Total acre feet released from reservoirs: 225,000 acre feet

Projected Runoff (March 1-October 31) 223,000 acre feet⁴

Reservoir depletion 2,500 acre feet

Total 225,500 acre feet

3. March 1 reservoir levels estimated at 18,000 acre feet

4. USDA projections adjusted for 1995 snowpack

BRIDGEPORT RESERVOIR

Storage: 10110 acre feet as of January 25, 1995⁵

Month	Proposed Discharge	Reservoir Storage	Acre Feet Release(Month)
March	200 c.f.s.	5,000 a.f.	12,000
April	200 c.f.s.	6,000 a.f.	12,000
May	250 c.f.s.	18,000 a.f.	15,000
June	400 c.f.s.	30,000 a.f.	24,000
July	200 c.f.s.	28,000 a.f.	12,000
August	200 c.f.s.	22,000 a.f.	12,000
September	150 c.f.s.	17,000 a.f.	9,000
October	100 c.f.s.	13,000 a.f.	6,000

Total acre feet released from reservoir	102,000 acre feet
-----------------------------------------	-------------------

Projected Run-off (March 1, October 31)	110,000 acre feet ⁶
-----------------------------------------	--------------------------------

Reservoir augmentation	<u>-8,000 acre feet</u>
------------------------	-------------------------

Total	102,000 acre feet
-------	-------------------

5. March 1 estimated reservoir level 15,000 acre feet

6. USDA projections adjusted for 1995 snowpack

COMBINED RIVER FLOWS

Month	c.f.s.
March	400
April	450
May	1,100
June	1,250
July	950
August	600
September	450
October	250

THE WABUSKA GAUGE

Because of groundwater depletion in Smith and Mason Valleys in 1994, it is unlikely that, at least to begin with, that Walker Rivers flows at the Wabuska Gauge will be substantial, even though some non-return ditches (Hall and Greenwood) have been running during the winter months.

Provided that the ditch diversion is minimal in March, it is possible that 30% of the flow or 130 c.f.s. would reach the Wabuska gauge. This flow will decrease in April with the effective beginning of the irrigation season when water is delivered to the ditches, but should increase to 50% in May because the projected flow of 1,100 c.f.s. is more than double the senior water rights and the remaining flow will move at a speed which will

inhibit groundwater capture. Even if 50 c.f.s. were lost to irrigation and other causes below Wabuska, Walker Lake would still receive 30,000 acre feet in May alone.

THE WATER MASTER

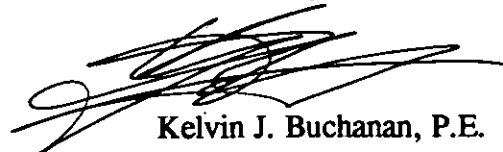

It appears that the water master exercises a considerable amount of leeway in administering water allocation under C-125. Upstream storage in the reservoirs is supposed to begin November 1 and end on March 1, which coincides with the beginning of irrigation season. Water is then released to the senior water rights holders. However, in March, 1993 for example, water storage increased in Bridgeport Reservoir by 10,000 acre feet.

Since this proposal does not violate C-125 in any way, the water master could implement the proposal by using the flood control argument with possible dissenters.

TIME FRAME

Time is of the essence in implementing this proposal to halt the degradation of Walker Lake. The Walker River Paiute Tribe⁷ has agreed to consider releasing water from Webber Reservoir to Walker Lake through the channel cleared in 1993 if they can be assured of this flow schedule.

Re: Walker Lake Proposal

Dear Jim,

As we discussed this morning, the volume of contained water in the snow pack when the proposal was authored on February 14 has decreased by almost 20 % today to where we are at about 91% of the April 1 snowpack for moisture content. Not only did we have no precipitation for two weeks, we had a record warm February. The moisture in the snowpack did not totally disappear of course. Both Bridgeport and Topaz Reservoirs contain 5% more water than I estimated and some has ponded in upland meadows. It is impossible to project average precipitation over any time period and it is not unusual that this particular two week period should have no precipitation. Even in winter, the Sierra weather pattern is dominated by a high pressure dome, penetrated on average by 6-8 very active storm systems. It would be most unfortunate if we were to get discouraged by the previous two week lack of precipitation, not pursue the proposal and then find that March precipitation has increased the snowpack to the predicted level. I have no reason to change my proposal based on the February precipitation totals.

As to your question about groundwater, precipitation this year will have very little impact on groundwater levels in Mason and Smith Valleys. Both Station 6 in Smith Valley and the Yerington weather station had received their normal October 1-April 30 precipitation by January 31, but the warm weather in February minimized the impact of this above normal precipitation (although Yerington has had 0.5 inches of precipitation in first 2 days of March).

It appears likely that a wetter pattern is setting up that will continue through next week. All parties can access the Sno-tel data on a daily basis and the snowpack may, by early next week, show a significant increase. This would provide an opportunity to review current data and perhaps an informal discussion with the parties could commence next week.

Your questions regarding the March 1 storage deadline were sound and I was remiss in writing only one sentence in explanation on this matter. The storage season ends on March 1 if the senior water rights users demand their irrigation water on that date. If they don't, then water can be stored in the reservoirs until such time as they do. When I said the Watermaster had leeway in releasing this water, he needs the approval of various other parties. I think there is a mechanism for early release, but all parties would have to agree. The senior water rights users would have to request the release of this water, knowing full well that the purpose of the release is for Walker Lake. There is an intermediate step in the process and then, additionally, the State Engineer would have to permit a change in beneficial use at the point of diversion so that water could go to Walker Lake. This is not a walk in the park, but it certainly could be achievable through cooperation.

I believe the Watermaster has more leeway in release of storage water if he believes that downstream flooding is a possibility.

The release of water from the reservoirs to accommodate the mixing of the Weed Pit water will also require some agreement between parties. The proposed ratio of ten to one (10/1) pit water to river will require a constant flow which may not necessarily conform with C-125. These are all tough questions.

As to the actual condition of the present snowpack, it is more similar to that of a late April snowpack. Because of January rains and warm February temperatures, it is almost saturated, meaning that a few warm days could cause a significant melt. In some respects this has already happened.

Please call me if you have any further questions.

Sincerely,

Kelvin Buchanan, P.E.
